

The Snake/Middle River Watershed needs your help.

The good news is that some streams in the Snake/Middle River watershed are healthy enough to support fish and the aquatic critters fish rely on for food. The bad news is that there are quite a few that do not, mainly because there is too much sediment in the rivers. And even more bad news is that four streams do not support swimming and fishing due to high levels of bacteria.

Please Join Us!

If you live in, care about, or recreate in the Snake/Middle River watershed, you're invited to join a discussion of local water quality and help prioritize where to focus restoration efforts. We want your ideas on how to tackle the problems, so we're inviting you to an open house and we have put together a plan that will make this a fun and informative event.

Watershed Open House

July 27, 4-7 P.M. Argyle Community Center

- Join us for fun and information
- Bring the family
- Activities for kids (water bugs and crafts)
- Interactive (tell us what YOU think)
- Short presentations every 30 minutes
- Displays and information booths
- Refreshments

See you there!

MIDDLE-SNAKE-TAMARAC RIVERS WATERSHED DISTRICT
